Capstone™ FS-83
Fluoropolymer

Technical Information

Description
Capstone™ FS-83 is a solvent-borne additive that provides low surface tension in solvent-based paints. It is compatible with most organic solvent-based systems. The low surface tension enables better wetting, spreading, leveling to correct solvent-borne coating defects, such as fisheyes, craters, pinholes, and orange peel. When cured into a coating, it provides water and oil repellency, as well as chemical resistance, to the film.

Even at very low use rates, FS-83 can deliver excellent repellency to the film, which can be measured by water and hexadecane contact angle. The typical use rate of FS-83 for most coating applications is from 0.02-0.1% on an active ingredient (A.I.) basis. For solvent-based paints, the typical use rate is 0.05 to 0.1%.

Applications

Paints and Coatings
- Improves wetting and leveling to eliminate craters, pinholes, fisheyes, and orange peel
- Improves water and oil repellency of dried film
- Compatible with wide range of solvent-based paints, such as alkyd, 1K, and 2K polyurethane systems

Waxes and Varnishes
- Improves wetting and leveling
- Reduces cratering and other coating defects
- Increases surface water and oil repellency
- Compatible with many solvent-based waxes and polishes

Fluoropolymer and PTFE Dispersion
- Improved dispersion stability

Typical Properties

**Capstone™ Repellents and Surfactants**
- Deliver more sustainable solutions with maximum performance
- Are in compliance with REACH requirements
- Are listed on TSCA inventory
