

The Chemours Company Sustainability Statement - 2016

Created from DuPont's performance chemicals businesses

The Chemours Company brings knowledge, experience, and world-class chemistry to our customers, our industry, and the world.

Our bedrock commitment to sustainability starts with the engineering and manufacturing of our own products and extends to our supply chains and ultimately our customers and their products.

Chemours is on a journey that is supported by our world-class assets, breakthrough technologies, know-how and a relentless drive to deliver higher margin, higher value chemistry that improves the lives of people everywhere. As this journey unfolds, we must evaluate what sustainability means to our new company.

Our corporate roots have shown engagements in a number of reporting frameworks commensurate with the ever changing dynamics and needs for transparency relative to our businesses with our many stakeholders.

Rather than approach sustainability reporting as we have in the past, we are taking an approach that begins with a deep evaluation of material issues (including non-financial areas) for our organization as individual business units and as an enterprise. This effort combined with the company transformation plan will shape our sustainability strategy for the foreseeable future.

While we are pursuing the materiality assessment for our company, our goal is to address other reporting frameworks after the completion of our assessment. This may or may not allow us to pursue some of the more commonly referenced reporting frameworks (e.g. EcoVadis, CDP, DJSI, etc.) in 2016, but it is imperative that we start this journey with the right first steps for the future of our company.

We look forward to sharing our progress as this exciting journey unfolds.
