

Intellectual Property Notice

Chemours is the owner of an international patent estate that covers R-1234yf (HFO-1234yf) as well as R-1234yf-containing compositions and methods for making and using compositions. Chemours actively monitors for patent infringement and will vigorously assert its rights under these patents, including seeking damages and injunctions to stop infringement.

A patent does not grant the patent holder permission to use that patent because the patent may be controlled or dominated by a Chemours patent.

A patent issued in one country does not grant permission to import, manufacture, or sell a product in another country.

A chemical registration (for example, REACH in the EU, IECSC in China, TSCA in the U.S., and ENCS in Japan) does not impact patent rights. A chemical registration does not grant permission to import, manufacture, or sell a product when that product infringes a Chemours patent.

Patents are not revoked or rendered unenforceable because the patent covers important products or products in high demand.

Ensure that you are purchasing R-1234yf and R-1234yf-containing blends from an authorized manufacturer or distributor. Obtaining R-1234yf from an unauthorized source may expose you to hazardous materials, void equipment warranty, and potentially incur liability as a patent infringer. Please contact your Chemours representative if you have any questions about authorized manufacturers and distributors.

Opteon™ YF (R-1234yf) refrigerant is a brand of The Chemours Company.
