Animal Use Principles

Product safety and sustainability are key focus areas for the Chemours Company. We use a variety of tools to address our product stewardship, safety, sustainability and regulatory obligations. These tools include animal testing where computer modeling, in vitro testing, or other animal alternatives are not available or appropriate. We follow the principles of the Three Rs - Replacement, Reduction, and Refinement - for all studies involving animals. When the use of animals is unavoidable, we will conduct the work in select laboratories that are certified by the AAALAC (Association for Assessment and Accreditation of Laboratory Animal Care) and/or meet the animal welfare requirements of the country or jurisdiction in which the testing laboratory operates.
