

## Climate Change: Our Pledge

*The Chemours Company is committed to addressing climate change—a significant challenge to an environmentally sustainable future.*

At Chemours, we are taking prudent, practical, and cost-effective actions to address climate change as we grow our operations and help our customers do the same. We are committed to improving our resource efficiency, to acting on opportunities to reduce our greenhouse gas emissions, to enhancing the eco-efficiency of our supply chain, and to encouraging our employees to reduce their own environmental footprints.

In that regard, we are working to set measurable targets to track our performance in these areas; we will share our progress on this work.

Chemours understands that maintaining safe, sustainable operations has an impact on our company, our communities, the environment, and our collective future. We continue to invest in research and development to develop safer, cleaner, and more efficient products and processes that help our customers and consumers reduce both their greenhouse gases and their overall environmental footprint.

We value collaboration to drive change and commit to working with policymakers, our value chain, and other organizations to encourage collective action for reducing greenhouse gases.
